Tom Camp	Engineer

DRUPAL EXPERIENCE

Drupal Username: Tom.Camp (https://www.drupal.org/u/tom.camp)
On Drupal.org since 2008

Drupal Contributions: Modules contributed: Moon Phases, Permalink

Drupal Projects: Globalnetplatform.org, ImprovingPrimaryCare.org, OurHoodCanal.org, MacCollCenter.org, StudentsRebuild.org, BezosFamilyFoundation.org, HealthyGen.org, DiabesityResearchFoundation.org, MercyCorps.org, AspenDailyNews.com, SunRealtyNC.com

Technologies: Drupal, PHP, CSS, HTML, JavaScript, MySQL, Git, Python

PROFESSIONAL EXPERIENCE

CivicActions, Inc **2015-Present**

Engineer

Serves as backend developer working with remote, agile teams of Drupal experts to build enterprise-level websites for client organizations. Brings over a decade of experience with Drupal and superior problem-solving skills to projects. Wields a broad range of technical skills, including compliance, coding, and configuring.

Technical Archiect: For DSCA GlobalNET, reviewed existing architecture of hosting environment, platform, and existing delivery pipeline practices to decompose the system and develop a multi-team DevOps environment to support migration and new development with uninterrupted operations.
Results: Plan was developed and successfully executed for secure version control, automated configuration management, and continuous integration and monitoring

Agile Sprint Planning: Prior to each sprint, worked with Business Analyst, Project Manager, and team members to review previous sprint and integrate support requests from users and admins. Assessed changes in user habits and preferences, team skills, and security vulnerabilities. Worked with front and back end developers to quickly research and determine if any new programming tools and techniques would be appropriate for upcoming sprints -- and if so, determined mentors or training requirements for team members. Ensured stakeholder buy-in for product definition and delivery approach for upcoming sprints.
Results: Agile stories for each sprint matched the technical deliverables as specific by Task Orders and approved by the Product Owner, ensuring that the work done would meet user needs.

Backend Development: Worked with agile developers to prototype aspects of the overall system architecture by testing frameworks, drupal modules, intrusion detection systems, monitoring tools, programming languages (Node.js, PHP), and other open source software platforms (Ilias, and others). All work was done on local development sandboxes (Docker or Docker with Vagrant depending on the engineer's workstation) that faithfully represented the production server environment. This ensured that the workstation environment preferred by each individual engineer (Windows, OSX, Debian, Ubuntu) all ran the same environment as the production server. Developer tasks were initiated and tracked as Agile Stories via a modern ticketing system (JIRA) as part of the continuous integration system. Also worked with frontend developer to ensure reports/lists produced the corrent content. Provided clear documentation written for both technical and non-technical audiences.
Results: Cost savings and quality assurance on custom development efforts.

Open Source: Utilized MariaDB, an open- source fork of MySQL (a modern open source database which enables scaling and storage of large datasets) to store user data. Both user profiles and content are indexed and made searchable with the integration of Apache Solr, a scalable search technology.
Results: Enhanced, user-friendly search function.

Pyramid Communications	**2013-2015**
Technical Lead / Senior Developer	
Served as Technical and Development Lead on Drupal projects, with a focus on backend and custom module development. Maintained and implemented enhancements for existing client websites. Worked with business development to assess business opportunities. Mentored team members in technical skills and processes. Managed and configured Pyramid's web hosting environment.	
Mercy Corps	**2010-2013**
Lead Developer	
Programmed and managed Mercy Corps' internal and marketing websites. Worked with internal IT staff to ensure that all of the web assets were secure and PCI compliant. Worked with the marketing team to create and develop fundraising campaigns and strategies. Led migration from Drupal 6 to 7, migrating over 35,000 nodes, images, and users.	
Freelance Web Contractor	**2009-2010**
Full service Drupal and Wordpress development and theming.	
Blue Tent Marketing	**2006-2009**
Director of Web Development	
Managed a team of developers and project managers, developing efficient systems and processes. Led Blue Tent's move from a proprietary CMS to Drupal. Lead Developer on complex property management and real estate websites.
